DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 2 to 5, drawn to a motor driven compressor having a permanent magnet rotor and stator cooling, classified in class 417, subclass 423.8.
- II. Claims 6 and 7, drawn to a motor driven compressor having a permanent magnet rotor and journal bearings, classified in class 417, subclass 423.12.
- III. Claims 8 and 9, drawn to a motor driven compressor having a tie rod, classified in class 417, subclass 423.1.
- IV. Claims 10 to 13, drawn to a motor driven compressor having a thrust bearing, classified in class 417, subclass 365.
- V. Claims 14 to 16, drawn to a motor driven compressor having rotor cooling, classified in class 417, subclass 370.
- VI. Claims 17 to 20, drawn to a centrifugal compressor having a two piece volute, classified in class 415, subclass 208.3.
- VII. Claims 21 and 22, drawn to a motor driven compressor having a commutating element for controlling the excitation of the motor stator, classified in class 417, subclass 44.1.

The inventions are distinct, each from the other because of the following reasons:

Inventions I to VII are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be

Art Unit: 3746

separately usable. In the instant case, invention I has separate utility since it does not require journal bearing shafts, a tie rod, a thrust bearing, rotor cooling, a two piece volute, or motor control. Each of the other inventions likewise does not require the features of any of the remaining inventions. See MPEP § 806.05(d).

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Claim 1 links inventions I and II and will be examined if either of groups I or II is elected.

A telephonic restriction has not been attempted by the examiner in view of the complexity of the restriction requirement.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

It is noted that claim 22 is incorrectly dependent on claim 18. It should be dependent on claim 21 and has been treated as such. Applicant should correct this oversight in response to this action.
